Belief updating in bipolar disorder predicts time of recurrence

DOI: 10.7554/eLife.58891

Detailed protocol

Thanks Emma,

As mentioned in the "memory control" comment, we asked how familiar, vivid, emotional arousing, negative and how often they experience the event in the past. Each subjective rating was evaluated by the subject on a likert scale (e.g., from not vivid at all to very vivid).

Hope this helps.

Thanks for your interest.

Best, Paolo
